

Which domain was used to fine-tune the Meta Llama 2 7B model?

Ans:
Financial

What was the model's behaviour when you domain-specific data entered in the file `model_evaluation.ipynb`?

Ans:

The stock is currently trading at \$31.40, which is 45.6% higher than the 52-week low of \$21.67 and 66.4% higher than the 52-week high.

What was the model's response to your domain-specific input in the `model_finetuning.ipynb` file once it had been fine-tuned?

Ans:

The S&P 500 is up 14% this year, but it's not the only index that's outperforming. The S&P MidCap 400 is up 16% so far in 2019, and the S&P
